

Assumptions:

1. It is possible that an ADMIN never changes a record in the database.
2. Multiple agencies can help or provide information on a specific invasive/harmful species.
3. There exists at least one agency that can help or provide assistance with every type of invasive/harmful species.
4. Some invasive/harmful species may be entered into the database prior to that species being regulated by an act. For example, the rapid spread of a new pathogen.
5. Some invasive/harmful species may be regulated in more than one legal document (act).
6. Every invasive/harmful species has a known or suspected method of distribution.
7. Every pathogen in our database impacts at least one species.
